

Mobile Robot Systems Mini Project 5

Sam Sully (sjs252), Paul Durbaba (pd452), Luke Dunsmore
(ldd25)

Lent 2020

Project Outline

Project Outline

- ▶ LIDAR based localisation (ex1)

Project Outline

- ▶ LIDAR based localisation (ex1)
- ▶ Improve with range and bearing of other robots (sjs252)

Project Outline

- ▶ LIDAR based localisation (ex1)
- ▶ Improve with range and bearing of other robots (sjs252)
- ▶ Centralised approach to world coverage (ldd25)

Project Outline

- ▶ LIDAR based localisation (ex1)
- ▶ Improve with range and bearing of other robots (sjs252)
- ▶ Centralised approach to world coverage (ldd25)
- ▶ Decentralised approach to world coverage (pd452)

Localisation

Localisation

- ▶ Particle filter

Localisation

- ▶ Particle filter
- ▶ LIDAR

Localisation

- ▶ Particle filter
- ▶ LIDAR
- ▶ Range & bearing

LIDAR

$$w_i = \sum_{s_j \in \text{Sensors}} \Phi(R(i, j), s_{ij}, \sigma^2)$$

- ▶ w_i = LIDAR weight of particle i
- ▶ s_{ij} = distance recorded by sensor j on the robot
- ▶ $\Phi(x, \mu, \sigma) =$ Gaussian PDF with mean μ and standard deviation σ
- ▶ $R(i, j)$ = ray traced distance from particle i in the direction of sensor j

Range & Bearing

$$\bar{w}_i = \sum_{r_j \in N_i} \sum_{p_k \in r_j} \Phi \left(\begin{bmatrix} D_i(p_k) \\ \Theta_i(p_k) \end{bmatrix}, \begin{bmatrix} d_j \\ \theta_j \end{bmatrix}, \xi \right)$$

- ▶ \bar{w}_i range & bearing weight of particle i
- ▶ N_i = robot i 's neighbours
- ▶ p_k ranges over the set of particles from robot r_j
- ▶ d_j = received distance between this robot and robot r_j
- ▶ θ_j = received bearing of this robot from r_j
- ▶ $D_i(p_k)$ = distance between the particle i on this robot and the particle p_k from the other robot
- ▶ $\Theta_i(p_k)$ = bearing between the particle i and the particle p_k on the other robot
- ▶ ξ = covariance matrix

Normalising factors omitted.

Performance Without Enhancement

Performance With Enhancement
